The SEJ report should have been with the package to CO last Oct/Nov. Here is a copy.

One thing that got “forgotten” about in all this is the company proposed as their “preferred option” to enlarge the ponds so they only discharge during precipitation. The existing ponds were supposed to be modified to operate as a “fill and discharge” operation. We never got a PTI for the changes to the ponds. We were to deal with a PTI after the NPDES was iss’d. That’s why the NPDES has language about “controlled discharge” and need to submit a PTI later and the original PN’d NPDES had the conditions about once a week discharge < 24 hrs. To meet this, forced them into a pond design to achieve this.

Bruce
